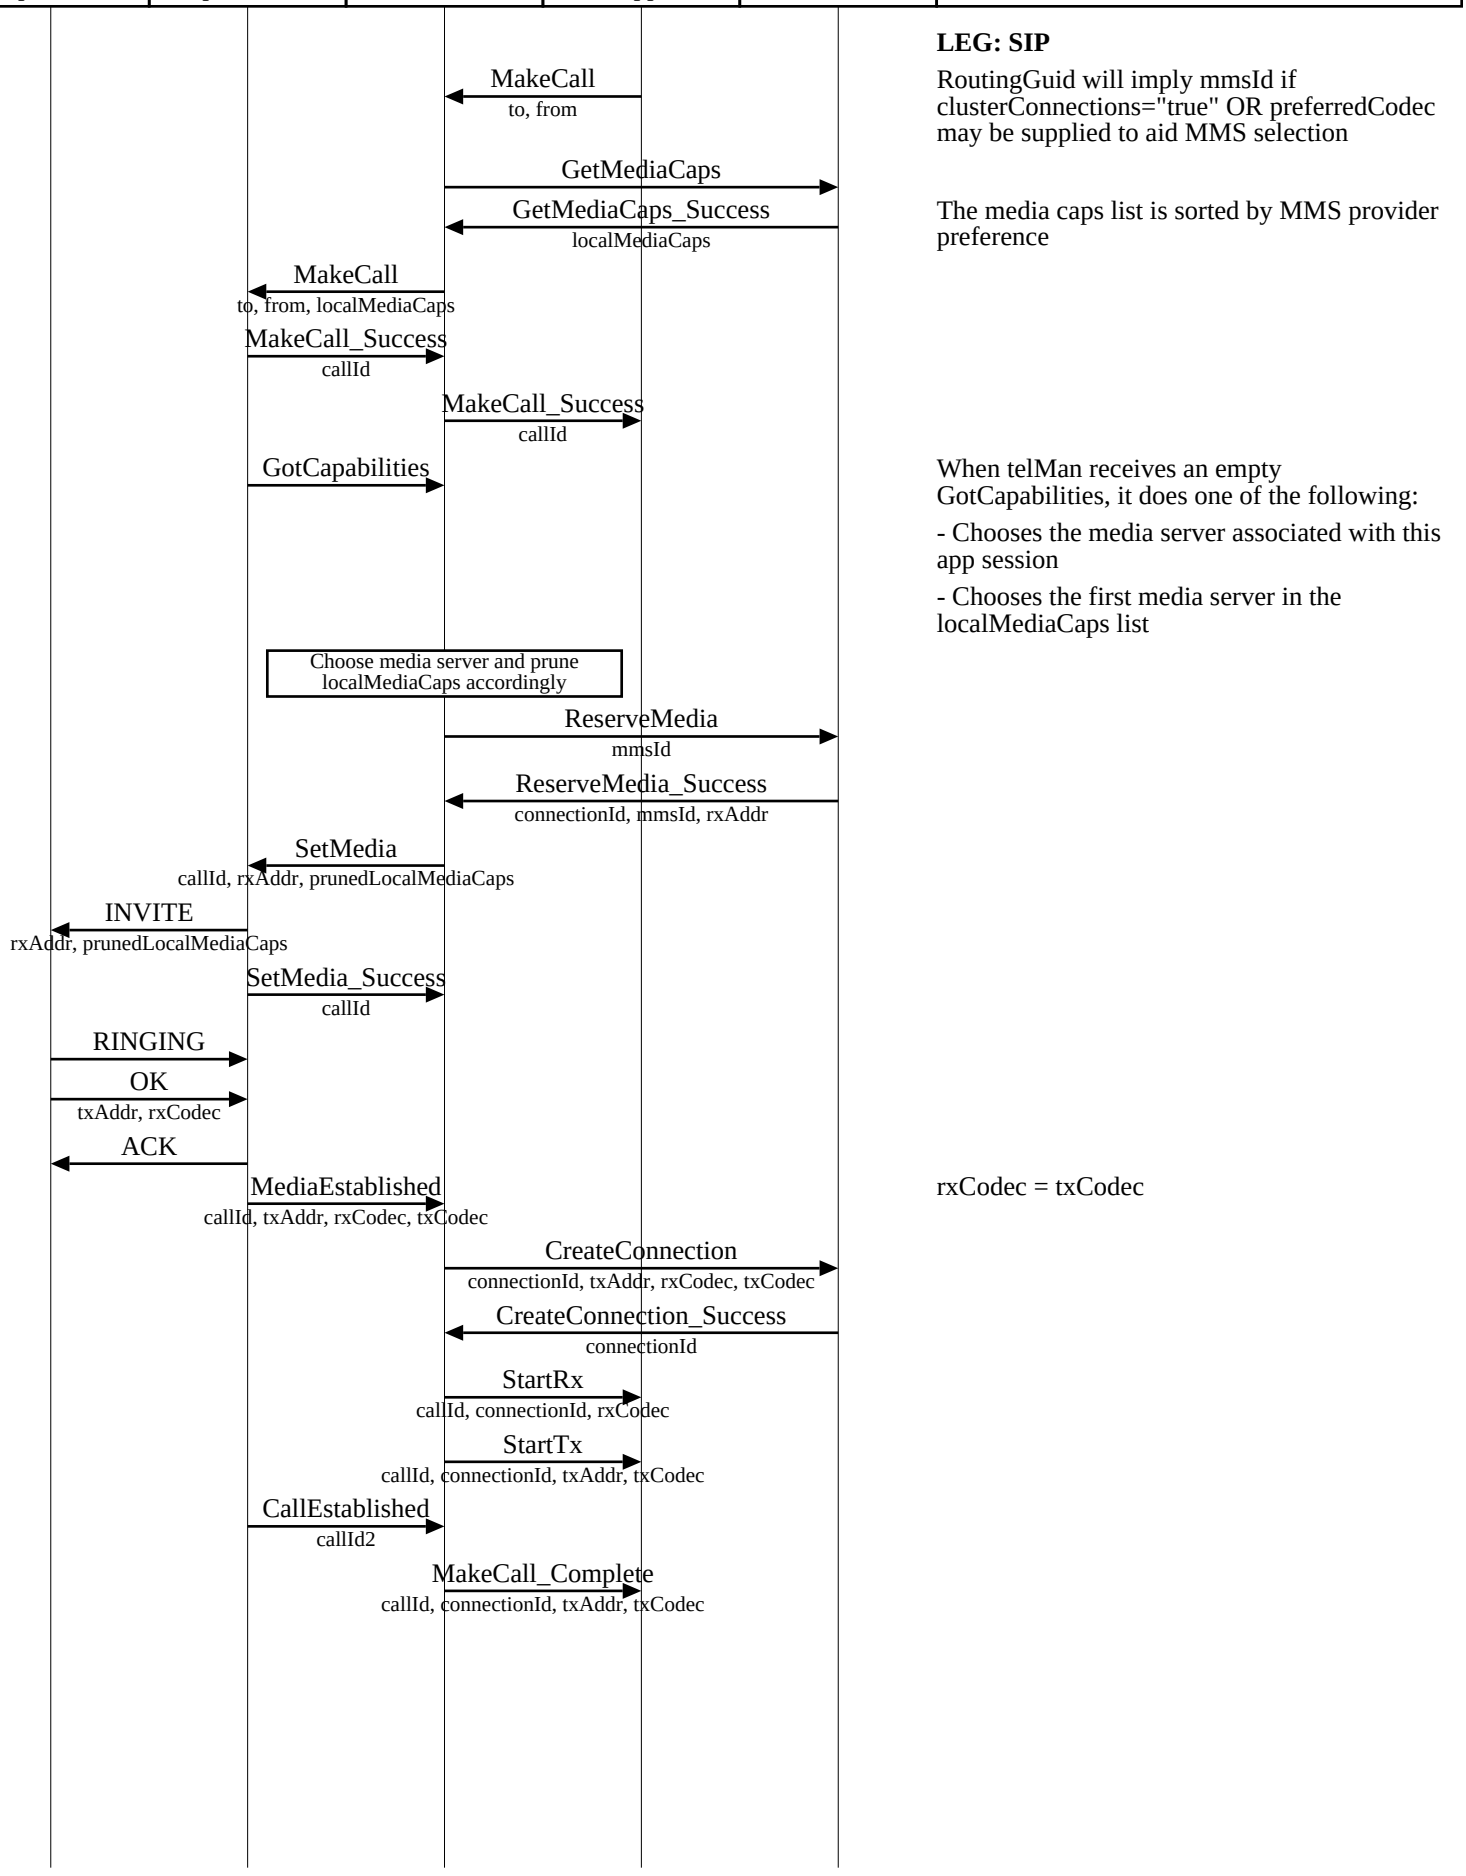
Outbound Call (CallControl - Outbound Call - SIP)

World	MCE				EventHelix.com/EventStudio 2.0
phone	App Server			MMS	
phone	provider	tel Man	app	MMS	12-Oct-04 19:43 (Page 1)



LEG: SIP

RoutingGuid will imply mmsId if clusterConnections="true" OR preferredCodec may be supplied to aid MMS selection

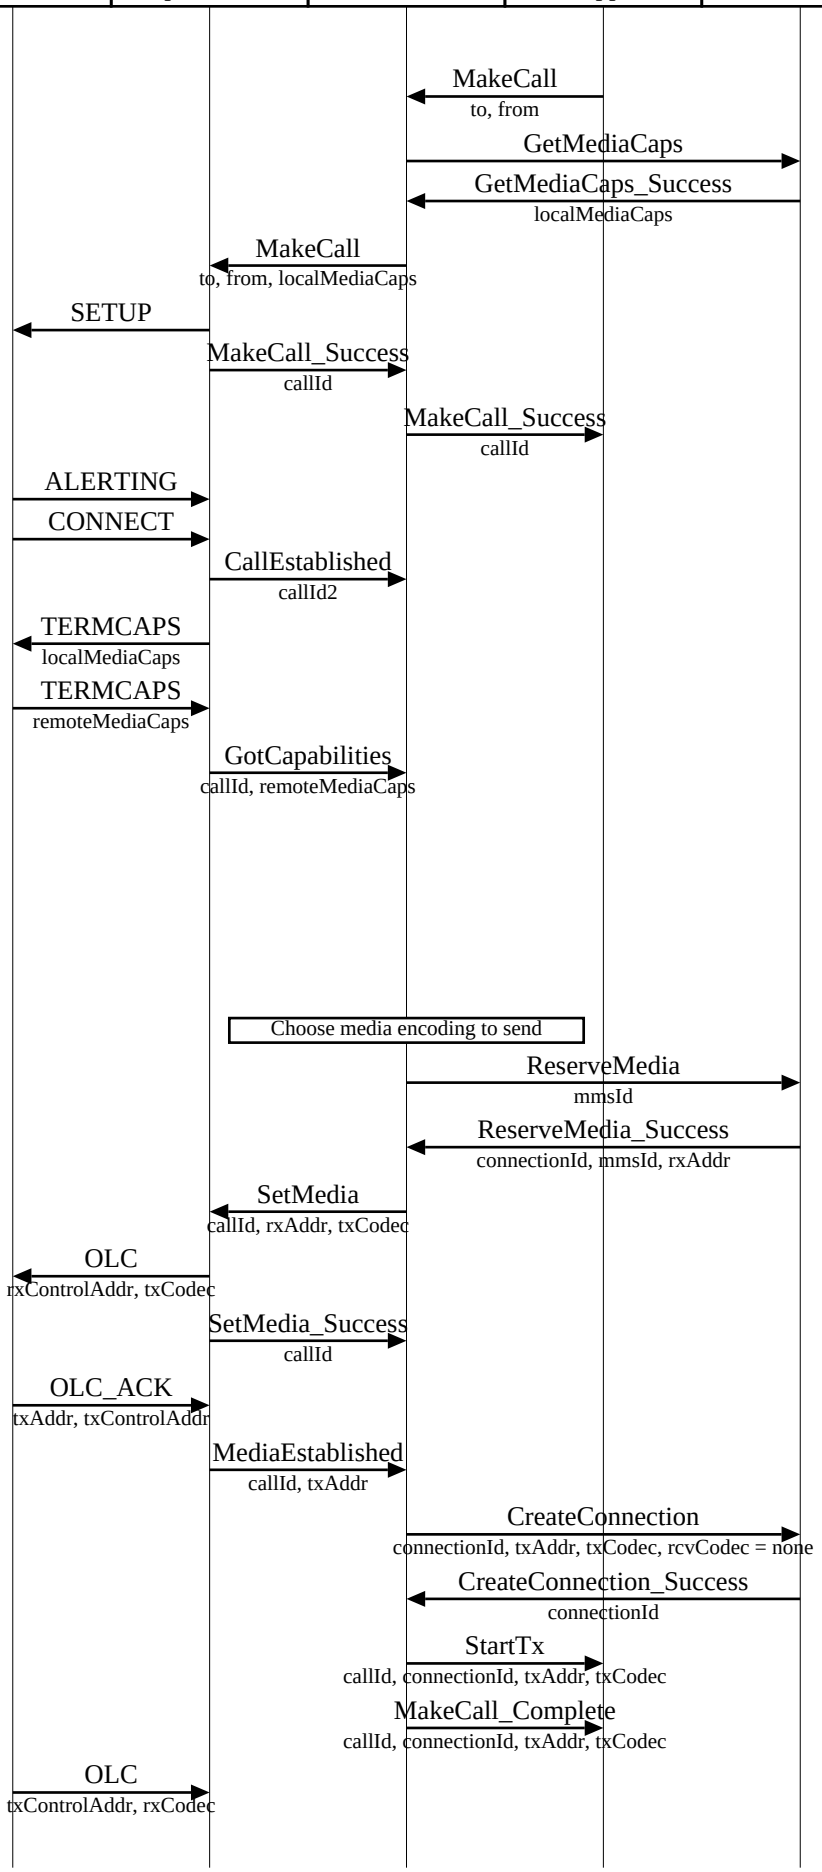
The media caps list is sorted by MMS provider preference

When telMan receives an empty GotCapabilities, it does one of the following:

- Chooses the media server associated with this app session
- Chooses the first media server in the localMediaCaps list

rxCodec = txCodec

LEG: H323



When telMan receives a populated GotCapabilities, it does one of the following:

- If there is a media server associated with this session (i.e. clusterConnections="true"), drop any remoteMediaCaps which it does not support. If none are supported, tear down call and send hangups to provider and app.

- Choose the first media server in the list which supports any codec in remoteMediaCaps
